

## On Demand Dosimetry Overview

### On Demand Dosimetry Support

Radiation oncology treatment process is complex and labor intensive. Crux Quality Solutions (CruxQS™) provides outstanding remote dosimetry services in a cost efficient and timely manner. Our range of short term and long term solutions for remote dosimetry can be provided on demand. Using the latest treatment planning systems, we are able to generate treatment plans and seamlessly integrate with our clients existing technology.

Our team of experienced CM D's collaborates with client physicians in every phase of the treatment planning process including contouring, fusion, 2D, 3D, IMRT, VMAT, Stereotactic brachytherapy treatments.

In addition, CruxQS™, offers board certified physicist to help with remote physics chart checks and plan review if required. Our team is knowledgeable in all current protocols, MPM recommendations, with expertise in all technological modalities.

By investing in the latest technologies, CruxQS™, is able to offer clients access to many treatment planning systems on the market today. We can accommodate all commissioned protocols guaranteeing the most accurate and seamless treatment delivery for the benefit of patient safety.

### Features

**OnDemand** - Truly on demand dosimetry services to provide permanent or temporary coverage for staff vacations, staff shortages or times of peak load.

**Quality** - Outstanding Certified Medical Dosimetrist and Medical Physicist at your service building a lasting partnership through direct communication, compassionate care and availability.

**Knowledge** - Our CM D's and Physicists are qualified professionals with extensive knowledge of all current treatment planning and record verifying systems and treatment techniques.

**Time and Cost Effectiveness** - If your needs are permanent or temporary, CruxQS™ provides an outstanding service tailored to your physicians, staff and patients in the most cost effective way.

**Communication** - We use the latest collaborative tools to ensure that there is a clear communications plan to demonstrate compassionate service to the radiation oncology team. Patient data is encrypted through the entire process from CT to treatment as required by HIPPA.

**Safety** - The CruxQS™ team is diligent in the review of deliverable safe treatment plans through internal peer review with patient safety in mind.

**Training** - We can offer training in CT simulation/patient positioning, normal tissue contouring, fusion, conformal, dynamic and inverse planning on most of today's leading planning systems.
